## PROFESSIONAL SUMMARY

Results-driven Computer Science Engineering student specializing in Data Science, AI/ML, and backend development. Skilled in Python, FastAPI, Flask, and data analytics with experience in building scalable applications, REST APIs, and real-time data-driven solutions.

## WORK EXPERIENCE

### AI/ML Developer Intern

June 2025 – July 2025

***Allsoft Solutions Pvt Ltd*** | Gurugram

- Developed and tested AI/ML models using Python and machine learning libraries to improve prediction accuracy and automate business processes.
- Analyzed large datasets, performed data cleaning and feature engineering, and generated actionable insights that supported data-driven decision-making.
- Collaborated with cross-functional teams to build dashboards, optimize model performance, and enhance operational efficiency through AI-based solutions.

### Backend Developer Intern

June 2024– August 2024

***HypeTeck Lifestyle*** | Gurugram

- Developed, tested, and maintained high-through put REST API endpoints using FastAPI for production backend services, ensuring seamless cross-team frontend integration.
- Implemented robust data validation and error-handling strategies that reduced API failure rates by 25%.
- Optimized backend performance and query latency, improving data flow efficiency between client and server architectures.

## TECHNICAL SKILLS

- **Languages:** Python, JavaScript, Java, SQL (MySQL, PostgreSQL, MongoDB), HTML5, CSS3
- **Backend Development:** FastAPI, Flask, REST APIs, WebSockets, SQLite
- **Quant & Data Analytics:** Pandas, NumPy, Time-Series Analysis, Backtesting, Upstox API
- **Frontend Development:** React, Next.js, Tailwind CSS
- **Developer Tools:** Git, GitHub
- **Cloud & DevOps**: Docker, AWS Basics, Microsoft Azure

## PROJECTS

**Algorithmic Trading System** | *Python, Pandas, FastAPI, Upstox API*

- Built multi-asset algorithmic trading bots using Python, integrating the Upstox API to process real-time market feeds.
- Implemented automated trade signal generation and order execution logic based on price action, volume, and Open Interest analysis.
- Developed a custom backtesting engine to evaluate historical strategy performance, optimizing risk parameters to achieve a target Sharpe Ratio of 1.02.

**Startup Helping Project – DS Analytics Dashboard** | *Python, Flask, React, JavaScript*

- Developed an intelligent, full-stack stock screening tool aggregating real-time and historical market data for early-stage evaluation.
- Designed and deployed an interactive dashboard surfacing critical risk/reward metrics, including asset volatility and historical drawdown.
- Integrated Flask backend with a React frontend to deliver fluid, real-time data visualization of technical indicators.

**Breakout Detection Bot** | *Python, Pandas, API Integration*

- Designed a standalone breakout detection system leveraging automated mathematical filters (EMA, RSI, ATR) and technical price patterns.
- Built a real-time signal alerting system that successfully flags high-probability trade opportunities with 73% accuracy.

## EDUCATION

**B.Tech in Computer Science Engineering (Data Science)** | CGPA: 8.02 — 2023 – Present
*K.R. Mangalam University* | Gurugram

**Senior Secondary (12th)** | Score: 83% — 2021 – 2023
*S.D Memorial Sr. Sec. School* | Gurugram

**Secondary (10th)** | Score: 92% — 2021
*Our Lady of Fatima Sr. Sec. School* | Gurugram

## CERTIFICATIONS

- Machine Learning with R **(IBM)**
- Data Analysis with Python **(IBM)**
- Data Science Professional Certification **(Oracle)**
- Google Data Analytics Professional Certificate **(Coursera)**
